EXPLANATION

New Hampshire's wetlands and stream systems provide important functions; including flood control, fish and wildlife habitat, water purification, water storage and recharge for both ground and surface waters. The National Wetlands Inventory (NWI) has provided wetland maps and geospatial wetland data for the United States since the mid-1970s. Most of the New Hampshire NWI maps were produced in the 1980s and require revision to improve their spatial and temporal accuracy. Accurate maps of the location and distribution of water resources are essential to sound decision making by both government and developers when rebuilding infrastructure and conserving water for a wide variety of users including business and industry.

NHDES was awarded an EPA grant in 2018 to update and enhance wetland resource data and tools, including NWI maps. NHDES entered a contract with Ducks Unlimited, Inc. (DU) to update NH's outdated NWI maps. Under the terms of the grant, NHDES is required to provide matching funds and to ensure proper accuracy assessment and field validation verification of the NWI maps and products. This contract was designed to provide both the matching funds and verification process for the EPA grant. NHDES will ensure this responsibility is met by using St. Mary's University of Minnesota (SMUM), GeoSpatial Services (GSS) to complete this Verification Project.

.

SMUM - GSS will validate NWI data completed by DU in addition to the primary NWI attributes and stream polygons update wetland map data using the most current aerial imagery and recently completed LiDAR data and provide additional information on wetland functions by applying hydrogeomorphic descriptors. This verification work will complete the update of New Hampshire's NWI map data. This information will be available to the public through the UNH-based New Hampshire Geographically Referenced Analysis and Information Transfer System (GRANIT).

After publishing a Request for Proposals and qualifications, SMUM - GSS was the selected contractor (see Attachment A). As one of the primary contractors to the NWI Program, SMUM -GSS has many years of experience with aerial photographic interpretation, LiDAR data, NWI maps, wetland classification, NRCS soils data, and wetland functional assessments. SMUM - GSS is very familiar with the Federal Geographic Data Committee (FGDC) wetland mapping standards and is committed to excellence in the mapping of wetlands throughout the US, including the New England region.

This agreement has been approved as to form, substance, and execution by the Office of the Attorney General.

We respectfully request your approval.
