Department of Environmental Services, State Mapping Program, Contract for Program Services	

EXPLANATION

The **sole source** contracts that are the subject of this request involve the state geological mapping program. The contractors listed in this request were specifically identified in the scope of work for the original grant proposal as required by the funding partner, the U.S. Geological Survey (USGS), under the STATEMAP Cooperative Geological Mapping Program. The qualifications of the contractors are rigorously evaluated by a USGS peer review panel which is convened annually in Washington, DC to make funding decisions for the program. Each of the contractors has previously produced high-quality maps that have been accepted by the USGS as deliverables for the STATEMAP program. Mapping contractors are subject to a pre-qualification process involving evaluation by a subcommittee of the NH Geological Resource Advisory Committee (NHGRAC), based on a Statement of Qualifications (SOQ). Eligibility criteria include: (1) personal education and experience in the discipline of field mapping, (2) recent successful geologic mapping experience, and (3) production of a geological map that has been accepted or published by the USGS in Reston, Virginia.

This STATEMAP program is designed to create or update geological maps in areas of the state where there is a critical need for geologic information. Geological map data are routinely used by hydrogeologic consultants, engineers, scientists, planners, and local officials as the basis for land-use master plans, groundwater availability assessments and groundwater protection initiatives, infrastructure expansion, and for evaluating geologic hazards. In addition, the mapping program contributes to our knowledge about an integral part of New Hampshire's natural history. The selection of areas for detailed mapping was reviewed and approved by NHGRAC, which consists of members from the consulting community, state agencies, academia, industry, and the general public. The criteria used in their selection included 1) critical need, 2) contribution to the state's Geological Mapping Strategic Plan, and 3) return of information for the investment of public funds.

In summary, the New Hampshire STATEMAP program has been very successful using contractors who have performed the field mapping in the past. Contractors will work under the direction of the State Geologist, who will review and approve all work before making a payment recommendation to the Department.

The contracts have been approved by the Department of Justice as to form, content, and execution. In the event that the Federal funds become no longer available, General funds will not be requested to support this program.

We respectfully request your approval.

Thomas S. Burack
Commissioner

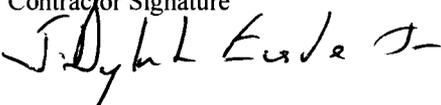

Notice: This agreement and all of its attachments shall become public upon submission to Governor and Executive Council for approval. Any information that is private, confidential or proprietary must be clearly identified to the agency and agreed to in writing prior to signing the contract.

EXHIBIT A

Scope of Services

BEDROCK GEOLOGIC MAPPING OF THE NORTHERN HALF OF JEFFERSON 7.5-MINUTE QUADRANGLE, NEW HAMPSHIRE

Scope of work:

Bedrock mapping of the northern half of the Jefferson 7.5-minute (1:24,000-scale) Quadrangle will include delineation of all bedrock units following the patterns, symbols, and cartography of USGS, including 1) contacts between lithologic units, 2) faults, joints, and other discontinuities with attention to such structures that may be water bearing, and 3) point observations of features such as bedding, foliations, and hinge lines. Symbols should conform to the Federal Geographic Data Committee digital cartographic standards of August 2006. The Contractor will incorporate existing geological information, and subsurface information provided by the NH Geological Survey (NHGS), a bureau of the New Hampshire Department of Environmental Services, to support geological interpretations and map products. The Jefferson Quadrangle should be reconciled with any available bedrock mapping. All map units shall be edge matched at the common boundaries between the Mt Dartmouth Quadrangle to the south and Mt Washington East Quadrangle to the southeast, so that seamless geospatial data can be created for the entire area of the adjoining quadrangles. High-quality photographs of significant geologic features shall be provided to NHGS, as digital image files and accompanied by descriptive captions and cross-referenced to actual localities indicated on the map. The Contractor shall also provide a concise legend containing a detailed description of each map unit and an approximately one-page narrative description of the bedrock geologic history of the quadrangle. A version of each of these documents shall be submitted in an electronic text-based format, preferably as separate Microsoft Word documents. Additionally, the Contractor shall submit a copy of observation data to NHGS. Acceptable formats for the submission of these field data include copies of field notes, electronically tabularized data (preferably in Microsoft Excel format) or all site-specific observations and measurements recorded on a base map. The Contractor will use GIS software to compile geologic field data and create the quadrangle map, following NHGS formatting and standards for the GIS files and the final map product.

The Contractor shall be available for a day-long field check of the mapped quadrangle. This event shall be arranged at the mutual convenience of the NHGS staff and the Contractor and should be performed toward the end of the contract period.

Maps of the Jefferson Quadrangle shall be prepared on a base with content equivalent to that of the most recent USGS 7.5-minute series topographic map for the quadrangle area, and which reproduces this content without distortions in scale. The Contractor shall make these maps available to the State Geologist for scientific review on or before September 8, 2017. The Contractor shall submit a final, scale stable, reproducible color copy of the Jefferson Quadrangle, consistent with USGS open-file release standards, to the State Geologist to complete the contract. Associated GIS files will also be provided as part of this deliverable.

The Contractor shall adhere to the specifications outlined by the Department's Standard Operating Procedures (DES-SOP #101) for accessing private lands. This includes providing NHGS with a copy of all logs indicating dates and times of contact with land owners. Guidance and assistance for operating within the SOP will be provided by the NHGS.

JD E 10/26/16

The estimated workdays to complete the work described above shall be as follows (renegotiable at the discretion of the State Geologist). The milestone schedules shall be as follows:

<u>Bedrock Mapping Activity</u>	<u>Days from Approval by Governor & Council</u>
1) Field Work	100 days
2) Preparation of manuscript map	110 days
3) Scientific review of manuscript map	120 days
4) Compilation of materials for open file publication	125 days

EXHIBIT B

Contract Price and Method of Payment

The total contract price shall be \$11,593.00. This amount will be charged for mapping the Jefferson Quadrangle, and billed as the percentage of work is completed. Detailed invoices will be required for all payments.

EXHIBIT C

Special Provisions

Paragraph 14 of the General Provisions of the standard state agreement is expressly waived. This provision is being waived because this is an individual and carrying this general liability insurance would be cost prohibitive.

EXHIBIT A

Scope of Services

SURFICIAL GEOLOGIC MAPPING OF THE BARTLETT 7.5-MINUTE QUADRANGLE, NEW HAMPSHIRE

Scope of work:

Surficial mapping of the Bartlett 7.5-minute (1:24,000-scale) Quadrangle will include delineation of all surficial materials following the patterns, symbols, and cartography of United States Geological Survey (USGS)-published quadrangles of Nashua North, Kingston, and Rochester, New Hampshire, and previously submitted maps funded by the cooperative STATEMAP program. This includes delineating the till, glaciofluvial deposits, glaciolacustrine deposits, freshwater wetlands, bedrock exposures, shallow bedrock, alluvium, and other materials particular to the area. Symbols should conform to the Federal Geographic Data Committee digital cartographic standards of August 2006. The map shall also include pertinent scientific observations and annotations related to the glacial history of the map area, such as interpreted ice margin positions and locations of meltwater channels, as well as an overlay of four categories of material textures (gravel, mixed sand and gravel, sand with minor silt, and silt and clay with minor sand). The Contractor will incorporate existing geological information, and subsurface information provided by the NH Geological Survey (NHGS), a bureau of the NH Department of Environmental Services (DES), to support geological interpretations and map products. All map units within the Bartlett Quadrangle must be reconciled with the mapped surficial geology of the North Conway West Quadrangle to the east, Crawford Notch Quadrangle to the northwest, Stairs Mountain Quadrangle to the north, and the Jackson Quadrangle to the northeast, so that a seamless coverage can be created for the entire area of the adjoining quadrangles. High-quality photographs of significant geologic features shall be provided to NHGS, as digital image files and accompanied by descriptive captions and cross-referenced to actual localities indicated on the map. The Contractor shall also provide a concise legend containing a detailed description of each map unit and an approximately one-page narrative description of the glacial history of the quadrangle. A version of each of these documents shall be submitted in an electronic text-based format, preferably as separate Microsoft Word documents. Additionally, the Contractor shall submit a copy of observation data to NHGS. Acceptable formats for the submission of these field data include copies of field notes, electronically tabularized data (preferably in Microsoft Excel format) or all site-specific observations and measurements recorded on a base map.

The Contractor shall be available for a day-long field check of the mapped quadrangle. This event shall be arranged at the mutual convenience of the NHGS staff and the Contractor and should be performed toward the end of the contract period.

Maps of the Bartlett Quadrangle shall be prepared on a base with content equivalent to that of the most recent USGS 7.5-minute series topographic map for the quadrangle area, and which reproduces this content without distortions in scale. The Contractor shall make these maps available to the State Geologist for scientific review on or before September 8, 2017. The Contractor shall submit a final, scale stable, reproducible color copy of the Bartlett Quadrangle, consistent with USGS open-file release to the State Geologist to complete the contract.

The Contractor shall adhere to the specifications outlined by DES's Standard Operating Procedures (DES-SOP #101) for accessing private lands. This includes providing NHGS with a copy of all logs

indicating dates and times of contact with land owners. Guidance and assistance for operating within the SOP will be provided by NHGS.

The milestone schedule to complete the work described above shall be as follows (renegotiable at the discretion of the State Geologist):

Schedule:

<u>Surficial Mapping Activity</u>	<u>Working Days upon Approval by Governor & Council</u>
1) Field Work	200 days
2) Preparation of manuscript map	220 days
3) Scientific review of manuscript map	240 days
4) Compilation of materials for open file publication	250 days

EXHIBIT B

Contract Price and Method of Payment

The total contract price shall be \$10,725.00. This amount will be charged for mapping the Bartlett Quadrangle, and billed as the percentage of work is completed. Detailed invoices will be required for all payments.

EXHIBIT C

Special Provisions

Paragraph 14 of the General Provisions of the standard state agreement is expressly waived. This provision is being waived because this is an individual and carrying this general liability insurance would be cost prohibitive.
