Dept. Environmental Services, Section 604 Planning, Grants – Federal	

EXPLANATION

Each year NHDES receives funds under Section 604(b) of the Clean Water Act, which must be granted to regional planning agencies for water quality planning projects. NHDES solicited proposals from each of the nine regional planning agencies to submit scopes of services for projects supporting local efforts to address water quality outcomes such as: 1) identifying the most cost effective and locally acceptable facility and nonpoint measures to meet and maintain water quality standards; 2) developing an implementation plan to obtain State and local financial and regulatory commitments to implement water quality plans; 3) determining the nature, extent, and causes of water quality problems in the State; and, 4) determining those publicly owned treatment works which should be constructed, taking into account the relative degree of effluent reduction attained and the consideration of alternatives to such construction.

Six planning agencies submitted letters of intent for one project each, and one planning agency submitted letters of intent for two projects. All seven letters of intent were evaluated and ranked based on the following criteria: a) a clear and concise project outcome statement including discussion of how this planning effort will be used to make progress toward implementation of corrective actions which will protect or restore water quality with respect to Clean Water Act assessments; b) success in addressing the water quality outcomes (numbers 1 through 4 above); c) a reasonable budget and timeline; d) a documented community need or opportunity; and, e) the level of public participation and commitment to the project. Based on the specified selection criteria and the amount of grant funding available, the three highest ranked proposals were selected for funding. Please refer to Attachment A for project budget estimate and to Attachment B for review results, and review panel member qualifications.

The Lakes Region Planning Commission plans to use 604(b) funds to create a replicable Septic System Improvement model which will provide communities with a toolbox of options to address nutrient loading from aging or failing septic systems. Nutrient loading from aging or failing septic systems has been identified by the State of New Hampshire and local communities as a nonpoint source of pollution contributing to water quality impairments. The project will focus on Moultonborough Bay Inlet for the template model, working with the Town of Moultonborough, NH, as Moultonborough Bay Inlet has documented water quality impairments. The Inlet has historically exhibited the highest levels of in-lake total phosphorus (TP) of the eight sub-basins which comprise Lake Winnepesaukee.

In the event that federal funds become no longer available, general funds will not be requested to support this project. The agreement has been approved by the Office of the Attorney General as to form, execution, and content.

We respectfully request your approval.

Clark B. Freise, Assistant Commissioner
