Explanation

This contract provides for consulting services to conduct data collection activities for NHComNet and FirstNet. The Department of Safety has undertaken an initiative to improve public safety radio coverage, interoperability, and reliability. The program is the combination of NH initiative known as the New Hampshire State Police radio communications network (NHComNet) and the federal National Wireless Broadband initiative (FirstNet). The initiative will have a number of phases and the scope will include:

- 1) defining deficiencies in the existing radio network including coverage gaps and end of life equipment;
- 2) identifying opportunities for new technologies to improve capabilities;
- 3) interfacing with federal interoperability initiatives such as FirstNet; and
- 4) procuring and implementing the new and improved radio infrastructure.

This contract for consulting services is the first major step in the Department of Safety initiative. Under this contract the vendor will complete an in-depth analysis of the current state of the radio infrastructure, which includes both State and local municipality equipment and capacity. FirstNet, as explained through its on-site consultation with New Hampshire, requires New Hampshire to do a data assessment of all first responder agencies statewide regarding the following: agency information, devices utilized, applications used, service plans in effect, and barriers that may exist for further expansion. Combining the analysis and research for both initiatives is both efficient and economical as it facilitates the use of FirstNet (NTIA) grant to cover a substantial portion of the contract's cost. This contract will also create a request for proposal

Her Excellency, Governor Margaret Wood Hassan

and the Honorable Council

(RFP) that will deliver the business requirements to upgrade obsolete components and add new technology components to the existing NHSP statewide radio system. The business requirements will identify what is needed to upgrade the existing P25 VHF high-band radio system to a current state of the art P25 IP-based digital VHF narrow-band radio system and microwave interconnect network radio system. The New Hampshire State Police communications network integrates and collaborates with other state, county, and local public agency partners; therefore, it is imperative that the NHSPComNet receives the necessary upgrade so that it is capable of serving all of the New Hampshire First Responder community in the future. The contract resulting from this RFP will be brought before the Governor and Executive Council at a future meeting.

The New Hampshire State Police solicited assistance from the Department of Administrative Services, Bureau of Purchase and Property, to facilitate the request for proposal for this contract. Purchase and Property provided objectivity and assistance with posting the request for proposal, witnessing bid submissions, structured vendor presentation, bid evaluation and scoring, vendor selection, and final price negotiations. The request for proposal was placed on the Administrative Services website from July 24, 2015 through August 28, 2015, pursuant to MOP 1600. Proposals were received from CDI Corporation and Mission Critical Partners, Inc. with each vendor/proposal being evaluated by a six-member committee on the basis of experience with the requested services, qualifications, pricing, and presentation.

Mission Critical Partners, Inc. (MCP) was the selected vendor based on them receiving the highest score according to the criteria set forth in the RFP. The scoring criteria are based upon the four categories: qualifications, experience, oral presentation, and pricing. MCP effectively communicated that they understood the depth of the issues, the inherent challenges and risks of the proposal. MCP demonstrated the ability and proficiency within their organization to address these issues. MCP is self-reliant with over 80 "in-house" staff specialists with expertise in all disciplines to perform such work. Immediate access to the experienced bench of technical specialists will help to ensure timely deliverables and budget requirements. MCP has worked with hundreds of projects similar to NHComNet and is intimately familiar with the FirstNet initiative. MCP has extensive experience working with governmental agencies like the State of New Hampshire and is uniquely qualified in understanding the administrative requirements and thresholds common to government entities. They have demonstrated the ability to work seamlessly in these environments to make sure projects are completed on time and within budget. The oral presentation that defined their proposal was made by a team of highly motivated employees of MCP who expressed the knowledge and expertise to perform this work. Subject matter experts presented in a format specific to their varying backgrounds in technical services, engineering services, manufacturing equipment services and network systems. The congregate of speakers directed their focus to the specificities of the State of New Hampshire versus the generalities of the proposal. Although MCP was not the lowest price, their qualifications, experience, and their ability to communicate the "how" in delivering the milestones of the RFP scored them the highest bidder and the chosen vendor.

Respectfully submitted,

EXHIBIT A cont'd
SCOPE OF SERVICES

The Contactor will provide the State with a work plan for the purpose of creating an in-depth, technical Request for Proposal for a large scale IP-based statewide radio communication upgrade implementation effort. Known as "NHComNet", the radio communication upgrade program will involve the replacement of, or additions to, components of the existing New Hampshire State Police (NHSP) P25 VHF high-band radio systems with current generation, state-of-the-art, P25 IP-based digital VHF narrow-band radio system and microwave interconnect network while addressing the implementation of widespread National Wireless Broadband components. The New Hampshire State Police Communications network integrates and collaborates with other state, county and local public agency partners. Therefore, it is imperative that NHSPComNet is capable of serving all of the New Hampshire First Responder community.

Pertinent to this Contract is to afford an opportunity to collect consensus among the stakeholders, to include NH first responders and public safety agencies. Equally important, the work plan shall illustrate New Hampshire's commitment to the First Responder Network Authority (FirstNet) by providing a holistic model of the potential coverage and capacity requirements for New Hampshire's portion of the National Public Safety Broadband Network (NPSBN) using existing public and private assets and infrastructure data (modeling effort). The engineering consultant will need to provide and investigate all statewide Communication mechanisms to include, but not limited to DOT, DRED, 9-1-1, etc., so that the result will be a comprehensive illustration of total statewide capabilities. This compilation will be utilized to validate discussions with FirstNet regarding coverage objectives, use cases, data usage and potential users. The First Responder Network Authority (FirstNet) has nationwide responsibility for planning and conducting the build-out of the National Public Safety Broadband Network (NPSBN). FirstNet is an independent authority within the National Telecommunications and Information Administration (NTIA), an entity of the U.S. Department of Commerce (DOC). The NPSBN will use 4G Long Term Evolution (LTE) technology over a 20MHz block of spectrum in the 700MHz range dedicated to public safety entities.

This project will be broken up into two efforts that will be funded uniquely by separate sources which require the consultant to develop two schedules of effort. All NTIA and FirstNet allowable data collection activities will be funded by using NTIA/SLIGP monies. All New Hampshire State Police Communications Network analysis will be funded by Phase I and Phase II State Capital Budget appropriations. Phase I will address Troop C and Troop E coverage deficiencies while Phase II will delineate expansion of Troop F coverage concerns along with a recommendation to purchase and replace of sixteen (16) Radio Communications Consoles throughout the NHSP Radio Network.

1. INTRODUCTION

The State of New Hampshire, acting through the Department of Safety, (Appendix A), is releasing this Request for Proposal (RFP) to procure consulting services to construct a comprehensive list of requirements and to develop a RFP and conduct data collection activities for the New Hampshire Communications Network (NHComNet) initiative. The State desires to contract with a single company that can supply one or more consultant(s) with the requisite skills and experience as well as an in-depth of knowledge required to complete these tasks.

The Vendor selected will review the DOS vision and gather requirements for the NHComNet. The Vendor will analyze the current systems, conduct interviews, and research all necessary information, including available products. The data and information gathered will be used to succinctly define the DOS and the national First Responder Network (FirstNet) requirements needed to develop the RFP and development of the FirstNet initiative, while keeping the core functionality of the current network and adding in system enhancements as defined in Appendix C: Scope, Requirements and Deliverables.

1.1 Contract Award

If a Contract is awarded, the Vendor must obtain written consent from the State before any public announcement or news release is issued pertaining to any Contract award. Such permission, at a minimum, will be dependent upon obtaining approval of the Contract by Governor and Executive Council of the State of New Hampshire.

The Vendor awarded this Contract will not be eligible to bid on the follow-up Implementation RFP.

1.2 Contract Term

Time is of the essence in the performance of a Vendor's obligations under the Contract.

The Vendor shall be fully prepared to commence work by October 19, 2015, after full execution of the Contract by the parties, and the receipt of required governmental approvals, including, but not limited to, Governor and Executive Council of the State of New Hampshire approval ("Effective Date"). In the event that the Contract does not become effective, the State shall be under no obligation to pay the Vendor for any costs incurred or Services performed; however, if the Contract becomes effective, all costs incurred prior to the Effective Date shall be paid under the terms of the Contract.

Appendix A: Background Information

A-1 The New Hampshire State Police Communication Maintenance Section is responsible for the installation, programming, and servicing of two-way voice and data communications equipment owned or operated by all Divisions within the New Hampshire Department of Safety. Additionally, the section provides installation, programming, and servicing of communications equipment for New Hampshire Department of Resources and Economic Development, New Hampshire Department of Fish and Game, and other state and local public safety entities.

This effort includes engineering and constructing T1, fractional T1, as well as IP circuits over legacy and current state of the art high speed IP broadband microwave radio systems which allow for interoperability with federal, state, county, and local public safety agencies. As this system capacity expands we will improve interoperability through added LMR (land mobile radio) coverage as well as direct connectivity to an increasing number of communication centers, public safety answering points ("PSAPS") and other first responders throughout the state and possibly neighboring states. This will support a more seamless data and communication interoperability system with all first responders. The Communication Maintenance section's mission is to provide the backbone and haul back infrastructure required to implement a more interoperable statewide communications network.

In collaboration with this State Police effort, New Hampshire is pursuing opportunities in conjunction with the First Responder Network Authority (FirstNet) regarding innovative and generational communication technologies that will elevate the ability of first responders throughout New Hampshire to more efficiently, effectively, and safely respond to critical incidents. FirstNet was brought about by the Middle Class Tax Relief and Job Creation Act of 2012. FirstNet is an independent authority within the National Telecommunications and Information Administration (NTIA) to provide emergency responders with the first high-speed wireless broadband network dedicated to public safety. The FirstNet network will be a single, nationwide long term evolution (LTE) network that makes easier for public safety users and first responders to communicate during emergencies, as well as in normal operations. Collaboration of this effort is promoted by the Office of Interoperability within the Department of Safety and through the creation of the Statewide Interoperability Executive Committee (SIEC), established by law in 2015, as a multi-discipline, multi-agency organization that addresses concerns for interoperability throughout New Hampshire as well as with our neighboring states, our borders with Canada and beyond. The SIEC is committed to cooperatively addressing the challenge of communications interoperability across multiple disciplines, at all levels of government, by creating a centralized interoperable communications plan and implementing capacity for a statewide communications network.

Appendix C: SCOPE, REQUIREMENTS, AND DELIVERABLES

C-1 Scope of Work

The Department, in collaboration with the Statewide Interoperability Executive Committee, seeks proposals from qualified Bidders to provide an engineering consultant for the purpose of creating an in-depth, technical Request for Proposal for a large scale IP-based statewide radio communication upgrade implementation effort. Known as "NHCommNet", the radio communication upgrade program will involve the replacement of, or additions to, components of the existing New Hampshire State Police (NHSP) P25 VHF high-band radio systems with current generation, state of the art, P25 IP-based digital VHF narrow-band radio system and microwave interconnect network while addressing the implementation of widespread National Wireless Broadband components. The New Hampshire State Police Communications network integrates and collaborates with other state, county and local public agency partners. Therefore, it is imperative that NHSPCommNet is capable of serving all of the New Hampshire First Responder community.

Pertinent to this proposal is to afford an opportunity to collect consensus among the stakeholders, to include NH first responders and public safety agencies. Equally important, the winning proposal shall illustrate New Hampshire's commitment to the First Responder Network Authority (FirstNet) by providing a holistic model of the potential coverage and capacity requirements for New Hampshire's portion of the National Public Safety Broadband Network (NPSBN) using existing public and private assets and infrastructure data (modeling effort). The engineering consultant will need to provide and investigate all statewide Communication mechanisms to include, but not limited to (DOT, DRED, 9-1-1, etc.) so that the result will be a comprehensive illustration of total statewide capabilities. This compilation will be utilized to validate discussions with FirstNet regarding coverage objectives, use cases, data usage and potential users. The First Responder Network Authority (FirstNet) has nationwide responsibility for planning and conducting the build-out of NPSBN. FirstNet is an independent authority within the National Telecommunications and Information Administration (NTIA), an entity of the U.S. Department of Commerce (DOC). The NPSBN will use 4G Long Term Evolution (LTE) technology over a 20MHz block of spectrum in the 700MHz range dedicated to public safety entities. The proposal specifies the New Hampshire State Police Radio Communications Network and the FirstNet anticipated build-out including dispatch entities along with all current and proposed tower sites as outlined by this study.

This project will be broken up into two efforts that will be funded uniquely by separate sources which require the consultant to develop two schedules of effort.. All NTIA and FirstNet allowable data collection activities will be funded by using NTIA/SLIGP monies. All New Hampshire State Police Communications Network analysis will be funded by Phase I and Phase II State Capital Budget appropriations. Phase I will address Troop C and Troop E coverage deficiencies while Phase II will delineate expansion of Troop F coverage concerns along with a recommendation to purchase and replace of sixteen (16) Radio Communications Consoles throughout the NHSP Radio Network. The State seeks to procure consulting services to construct a comprehensive list of asset requirements and to develop an RFP for the FirstNet 700 MHz LTE Network and for the New Hampshire State Police P25 VHF High Band Radio System. The State desires to contract with a single company that can supply one or more consultant(s) with the requisite skills and experience as well as depth of knowledge required to complete these tasks as listed in Appendix C: Scope, Requirements and Deliverables.

1.2 Desired Project Outcome

The desired outcome for this project is three-fold: first, to provide an independent consultant that will illustrate the current status and anticipated needs of the New Hampshire State Police Communications Network, creating an assessment of the statewide State Police and Stakeholder radio (LMR) and microwave network (LAN); secondly, to collect and interpret data collection throughout the State by analyzing the proposed build-out of the FirstNet Plan as designated by FirstNet with regard to coverage objectives, capacity modeling, user and usage identification, and the State Plan decision process; and lastly, develop the RFP for the FirstNet initiative.

1.3 Contract Award

C-2 Vendor Responsibilities. The Vendor will be responsible for providing a knowledgeable, qualified engineering consultant, versed in FirstNet familiarity with a proven understanding of the business functions and technical aspects associated with a large-scale public safety enterprise IP-based radio communication system including: two-way radio communications infrastructure, microwave backhaul requirements, dispatch communications centers, P25 Land Mobile Radio coverage requirements, Federal Communications Commission (FCC) frequency coordination, tower site permitting, and quality of service audits. The successful response to this request will propose an engineering consultant with the requisite skills and experience to assist with the successful implementation of the new and enhanced radio communications system. Proposed individuals must provide documentation that will demonstrate an appropriate level of expertise with current and previous generation communication system implementation projects and their technical requirements, as well as extensive project management skills with projects of similar size and scope, including the use of project tracking and reporting tools. Additionally, proposed individuals will demonstrate the ability to effectively communicate orally, in writing, and with electronic media.

OBJECTIVE

The objective of this procurement is to obtain the services of an individual to provide leadership and oversight for a large scale radio communications implementation effort. The New Hampshire State Police ('NHSP') Communications Network program and the FirstNet proposed data collection and proposed build-out, "NHCommNet", will further develop and improve the NHSP's aged VHF high-band radio systems along with the recommended implementation of a statewide incorporated NPSBN. The newly engineered system will:

- Improve the overall coverage reliability and quality of radio communications
- Enhance mobile radio coverage to meet public safety industry standard of 95/95.
- Be compliant with APCO P25 and FCC VHF narrowband requirements
- Built to stringent public safety and Motorola R-56 site construction standards.
- Improve interoperability upon completion
- Address two-way radio and microwave licensing and frequency management needs across the state
- Promote the consolidation of the dispatch infrastructure and statewide interoperability
- Be scalable to accommodate participation of other federal, state, county, or municipal entities who may choose to leverage portions of this infrastructure into their future operation plans
- Align with identified funding methodology so that no portion of the investment would become stranded if subsequent funding should not come to fruition
- Provide for continuity of dispatch communications center operations during implementation.
