

The State of New Hampshire
Department of Environmental Services

Robert R. Scott, Commissioner

Rep. Chris Christensen, Chairman

Oil Fund Disbursement Board

August 27, 2018

His Excellency, Governor Christopher T. Sununu
 and the Honorable Council
 State House
 Concord, New Hampshire 03301

REQUESTED ACTION

Pursuant to RSA 146-D:5, II, retroactively accept the 2016 and 2017 annual reports of the Oil Fund Disbursement Board (Board).

EXPLANATION

The Board hereby submits its annual reports on the status of the New Hampshire Petroleum Cleanup Fund Program for the State Fiscal Years that ended on June 30, 2016 and June 30, 2017. Submittal of the annual report was delayed due to staffing changes in the Fund Management Section at the Department of Environmental Services (NHDES) and demands placed on Waste Management Division staff resulting from the discovery of the perfluoroalkyl substances (PFAS) contamination in southern New Hampshire in 2016.

The reimbursement fund program has a history of service to New Hampshire citizens, in providing financial resources to remedy environmental impacts due to releases of petroleum product. Prior to 2016, the program included four separate dedicated funds authorized by state statute for the cleanup of petroleum contamination: the Oil Discharge & Disposal Cleanup Fund authorized by RSA 146-D, the Fuel Oil Discharge Cleanup Fund authorized by RSA 146-E, the Motor Oil Discharge Cleanup Fund authorized by RSA 146-F, and the Gasoline Remediation & Elimination of Ethers Fund authorized by RSA 146-G. With passage of HB 664, which became effective July 1, 2016, these four funds were consolidated into a single reimbursement fund established under RSA 146-D.

The fund operates as comprehensive excess insurance that protects facility owner assets and ensures timely and cost-effective cleanup of petroleum contamination. In addition to protecting public health and the environment, the funds play a significant and important role in economic development. The funds also provide financial assistance for the problem of methyl tertiary-butyl ether ("MtBE") contamination. MtBE impacts owners of public and private water supply wells statewide, despite a ban on the gasoline additive that was effective January 1, 2007. It is important to note that the Petroleum Cleanup Fund Program covers cleanup work for on-going projects and a limited number of new projects. In addition to, and separate from, the funds administered by the Board, new funding resulting from settlement of the State's 2003 MtBE lawsuit is being used for contamination investigation and cleanup, water supply monitoring, and to address impacted drinking water supplies.

DES Web Site: www.des.nh.gov

P.O. Box 95, 29 Hazen Drive, Concord, New Hampshire 03302-0095

Telephone: (603) 271-3899 Fax: (603) 271-2181 TDD Access: Relay NH 1-800-735-2964

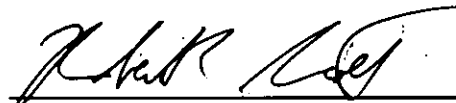

The funds are also available for heating oil contamination cleanup and replacement of substandard on-premise-use heating oil storage tank systems. The tank replacement program for low-income homeowners is part of our efforts to reduce the incidence of heating oil releases to the environment and thus reduce cleanup expenses. In June of 2017, HB 380-FN was signed into law, increasing the reimbursement limit for low-income homeowners from \$1,500 to \$2,250. This increase went into effect for FY 2018 and will be reflected in the 2018 annual report. HB 380-FN also provided clarification for reimbursement of costs for potential contamination source properties contaminated by gasoline ethers. Continued prevention programs allowed these improved programs without increasing fees.

The Board and DES monitor fund program revenues and expenses and prioritize cleanup projects in consideration of public health/environmental risk, demand, and availability of funds. DES personnel work diligently to assist owners of contaminated public and private water supply wells, and to bring cleanup projects to regulatory closure. We also direct significant effort toward petroleum storage facility owner/operator outreach and training for release prevention. However, existing groundwater contamination in many areas of the state will be slow to degrade, and new contamination projects will still be discovered in future years despite highly effective release prevention efforts. Thus, continuation of the Petroleum Cleanup Fund Program and adequate program funding are vital to protect public health and environmental quality in New Hampshire.

We respectfully request your acceptance of this report.

Rep. Chris Christensen, Chairman
Oil Fund Disbursement Board

Robert R. Scott, Commissioner

August 27, 2018

EXECUTIVE SUMMARY

Pursuant to RSA 146-D:5, this document presents the Annual Report of the Oil Fund Disbursement Board on the Oil Discharge and Disposal Cleanup Fund for the Fiscal Years (FY) ending June 30, 2016 and June 30, 2017. The report includes fund program background and objectives, FY 2016 and 2017 activity, current and historic financial activity, and revenue and expense projections for the next two fiscal years. The report and related program information is available at:

<http://des.nh.gov/organization/divisions/waste/orcb/fms/prfp/orcb/fms/prfp/index.htm>

Program Background

The New Hampshire Petroleum Fund Program is a financial assistance program for owners of petroleum storage facilities, owners of public and private water supplies, and owners of properties identified as a source of gasoline ether contamination, predominately methyl tertiary-butyl ether (MtBE). Prior to 2016, the program included four separate dedicated funds authorized by state statute for the cleanup of petroleum contamination: the Oil Discharge & Disposal Cleanup Fund authorized by RSA 146-D, the Fuel Oil Discharge Cleanup Fund authorized by RSA 146-E, the Motor Oil Discharge Cleanup Fund authorized by RSA 146-F, and the Gasoline Remediation & Elimination of Ethers Fund authorized by RSA 146-G. With passage of HB 664, which became effective July 1, 2016, these four funds were consolidated into a single reimbursement fund established under RSA 146-D.

RSA 146-D was originally enacted into law in July 1988. The program serves New Hampshire citizens by providing financial resources to protect public health, remedy environmental impacts, and avoid financial hardship.

The Oil Discharge & Disposal Cleanup Fund provides "excess insurance" coverage for owners of underground storage tank (UST) facilities, owners of above ground storage tank (AST) facilities, owners of on-premise-use heating oil facilities (primarily residential properties), and owners of land where facilities are or were located. Under federal and state regulations, UST owners are required to demonstrate financial responsibility for

contamination cleanup. The Oil Discharge & Disposal Cleanup Fund satisfies both the federal and state financial responsibility requirement. To qualify for state fund coverage, facilities must be in compliance with all applicable state and federal rules for operation and maintenance. Thus the Fund program provides an incentive to reduce the risk of releases. Out-of-use facilities must be properly closed, which is typically accomplished by removal of the storage tanks from the property. The fund provides a comprehensive excess insurance program that protects facility owners from financial devastation and ensures timely and cost-effective cleanup of petroleum contamination. Owners of petroleum storage facilities may request reimbursement for cleanup costs incurred due to facility releases.

In addition, low-income homeowners may receive up to \$1,500 in funds for repair or replacement of substandard on-premise-use fuel oil storage tank systems, to prevent releases and avoid cleanup expenses.

The Oil Discharge & Disposal Cleanup Fund is also available to specifically address the problem of MtBE contamination in public and private drinking water supply wells throughout the state. Although MtBE was banned as a gasoline fuel additive effective January 1, 2007, it remains a significant contaminant of concern in groundwater.

The fund program is administered by the Oil Fund Disbursement Board (Board), which is composed of twelve members representing the N.H. Legislature, the petroleum industry, state agencies and the general public. The Board is administratively attached to the Department of Environmental Services

(DES), which performs program support services. The Board meets regularly to approve activity reports, review policies and procedures, consider rule waiver requests, and hear appeals.

Reimbursements from the Oil Discharge & Disposal Cleanup Fund (ODDCF) are subject to N.H. Administrative Rules Chapter Odb 400 and Board policies.

Objectives & Activity

The Board and DES work cooperatively to ensure that the purpose and goals established by statute for the fund are met, which are protection of public health and the environment through the funding of cleanup activities for petroleum contamination in soil and water and funding of activities to prevent releases that cause petroleum contamination. DES program staff work to move cleanup projects toward regulatory closure in a timely manner. This activity includes review and approval of cleanup work scopes and budgets, corrective action reports, and reimbursement requests. In a typical month, DES staff will review and approve 90 work scopes/budgets, 450 corrective action reports, and 180 reimbursement requests ranging from under \$1,000 to over \$400,000. Whenever possible, innovative and performance-based strategies are employed to improve cleanup results and decrease the time to complete regulatory closure of a project.

The Board oversees financial management of the fund, including development and implementation of rules, policies, and procedures for fund eligibility and reimbursement request processing. In its efforts, the Board may employ independent

auditors or consultants, and relies on the Department of Justice for legal counsel.

Community Assistance & Economic Development

Since program inception, \$285,999,656 has been disbursed from the fund to individuals, small and large business owners, political subdivisions, and state agencies for cleanup cost reimbursement, with comparatively low program management and administrative costs. Petroleum storage facility owners or individuals in nearly every community have received fund program cleanup cost assistance. In addition, \$4,411,749 has been disbursed to low-income homeowners for fuel oil release prevention. See Tables 1 and 2 in the Appendix.

The fund provides benefits in protecting public health and in environmental damage prevention and restoration. Further, the program provides ancillary economic development benefits by offsetting unplanned costs that would otherwise be incurred by property owners and by encouraging property revitalization and reuse. Numerous blighted properties in the state have been successfully redeveloped, including municipally-owned properties where cleanup cost funding often facilitates or leverages private development funds. Properties with low taxable value due to contamination are restored to productive use.

Program Recognition

The New Hampshire Petroleum Fund Program continues to receive high marks from USEPA, the consulting community, petroleum industry representatives, and facility owners. New Hampshire has achieved nearly 100%

regulatory compliance in its efforts to remove or upgrade substandard underground storage tanks to prevent releases. Therefore, the risk of financial impact to the ODDCF is greatly reduced as compared to when the program began and the rate of releases was much greater. Our compliance performance places us at the top tier nationally among the states.

Completing regulatory closure of existing ODDCF cleanup projects depends on adequate revenues. In addition, the Safetank Release Prevention Program can greatly reduce future cleanup expenses at on-premise-use heating oil facilities. Thus, the Board and DES work to ensure continuous improvement in management of the fund, and make recommendations to the Governor and Legislature on addressing future revenue needs for this vital program.

Legislation, Rulemaking & Related Activity

In June of 2017, HB 380-FN was signed into law, increasing the Safetank reimbursement limit for low-income homeowners from \$1,500 to \$2,250. This increase went into effect for FY 2018 and will be reflected in the 2018 annual report. HB 380-FN also provided clarification for reimbursement of costs for potential contamination source properties contaminated by gasoline ethers.

The most recent revisions to the fund program rules under N.H. Administrative Rules Chapters Odb 100, 200 and 400 were adopted in September 2011, December 2013, and April 2014. An update to the rules is expected in 2018. The program guidance manual was updated in January 2012, and provides

comprehensive information on accessing the reimbursement funds. Another update is planned for 2018. The manual is available online at:

<http://des.nh.gov/organization/divisions/waste/orcb/fms/prfp/orcb/fms/prfp/index.htm>

Cleanup Project Activity

For a typical project, the sequence of "phased" cleanup work from discovery of a release through regulatory closure is: emergency services, initial response, site characterization, site investigation, remedial plan, remedial plan implementation, and monitoring. Monitoring may also occur at projects where remediation is delayed or postponed. The nature of the product released dictates the type of work needed to complete cleanup and achieve site closure. A gasoline release will typically spread further in the soil and groundwater than a fuel oil release. Therefore, a comprehensive site investigation is usually required prior to remedial plan development and implementation. In contrast, contamination from a fuel oil release is frequently limited to soil, and cleanup work typically occurs under the initial response phase. These projects move more quickly to regulatory closure without a comprehensive site investigation.

ODDCF cleanup expenses from 1990 through the present were fairly evenly distributed among the initial response, site investigation, remedial, and monitoring phases as new projects were initiated and existing projects closed. In FY 2016 there were 870 active ODDCF-eligible projects, with 103 new projects reported during the

fiscal year. By the end of FY 2017, the number of active projects had increased to 879, with 66 new projects reported during the fiscal year. Of the new projects, the majority were releases from on-premise-use fuel oil storage tank systems, with 79 discovered in FY 2016 and 54 in FY 2017. In future years DES anticipates the percentage of remedial costs will increase as regulatory closure of active projects is completed and the discovery of new releases requiring investigation diminishes for regulated AST, UST, and on-premise-use heating oil facilities.

Table 3 and Figure 1 in the Appendix, respectively, provide cleanup project statistics and illustrate the historic distribution of cleanup project costs for purposes of comparison among the four categories of ODDCF projects, based on the type of release. Table 4 in the Appendix provides a detailed list of in-progress cleanup projects by community.

Financial Activity

Management Discussion of Income and Expenses: Annual operating revenue to the ODDCF is provided through import fees on petroleum products collected by the Department of Safety. The fund has a balance "ceiling" and "floor" established by statute, such that import fee collections are suspended when the ceiling is reached and collections resume when the balance is paid-down to the floor. However, current and future demand on the ODDCF will likely preclude reaching the ceiling. Ensuring that sufficient funds are available to support

present and future cleanup projects is a primary focus of program planning.

Fund program financial operations follow the State FY calendar of July 1st to June 30th, and the state biennium budget cycle.

The Board is pleased to report the majority of program revenues are directed to achieving established goals and objectives, while overall program management and administrative costs for the ODDCF program average approximately 12% of total expenses. DES supervisory, project management, facility compliance, and administrative staff are able to work under the fund, through the use of an administrative expense account that is supported by the fund. Overtime and compensatory time is also available to provide additional staff-hours as needed to meet peak workload demands, versus maintaining sufficient full-time staff to cover all potential workload demands. DES staff processed cleanup and release prevention reimbursements and managed cleanup work totaling \$11,731,971 in FY 2016, with \$10,886,958 reimbursed in FY 2017. These costs do not include contract clean-up expenses.

Operating Revenues: ODDCF revenues decreased roughly 3.0% from \$16,772,486 in FY 2015 to \$16,273,699 in FY 2016. In FY 2017 revenues were \$15,974,482, a decline of 1.8% from the previous fiscal year. A level motor fuel import trend would reasonably be expected due to increases in vehicle miles traveled in the state being offset by increasing fuel efficiency. Retail price fluctuation of gasoline and diesel fuel may

influence imports in future years and the impacts cannot be fully predicted. Revenues from fuel oil imports have generally declined with decreasing imports due to changing weather patterns and conversion to alternate heating fuels, such as natural gas, propane, or wood. DES prioritizes cleanup projects to optimize available revenues, and maintain a minimum fund balance for contingencies. The ODDCF balance increased 26.8% from \$6,852,578 at the end of FY 2015 to \$8,692,412 at the end of FY 2016. By the end of FY 2017 the balance had grown to \$11,050,729, an increase of 27.1%. The increases in the balance are primarily due to significant turnover in program staff at DES, resulting in extended period with vacant project manager positions and the resultant reduction in pace of corrective action work approvals.

Program Management & Administrative Costs: Total program management and administrative cost allocations decreased 0.2% between FY 2015 (\$2,625,695) and FY 2016 (\$2,620,865). For FY 2017, costs increased approximately 2.2% to \$2,679,312. The fluctuations in program management and administrative costs over this time period are predominately attributable to changes in staffing levels. Increases in personnel and benefit expenses were partially offset due to being less than fully staffed for much of FY 2016. FY 2017 costs are reflective of a more fully staffed program. However, as noted previously, program management and administrative costs are historically approximately 12% of total expenses. Administrative cost allocation budgets for FY 2018 are based on an

assumption that all positions remain filled, and applying conservative estimates for operating expenses and inter-agency transfers for program support costs. In addition, the Board share of DES contaminated site management costs and related expenses is expected to increase in FY 2018 due to level funding in federal grants.

Cleanup Project Expenses: ODDCF cleanup and release prevention project reimbursements decreased 2.4% from \$12,013,284 in FY 2015 to \$11,731,971 in FY 2016. In FY 2017 reimbursement declined an additional 7.2% to \$10,886,958. Demand is expected to remain steady due to remediation projects. Such projects take time to complete the required preliminary investigations, cost analysis, planning, design, and bidding (if applicable.) Thus, total cleanup project expenses may increase or decrease from year-to-year. More projects are expected to be completed in FY 2018. The steady average annual demand for cleanup funds is attributable to a relatively slow decline in the number of active projects due to the high percentage with continuing groundwater impacts. Closing these projects requires considerable investment in active remediation or long-term monitoring of natural attenuation. In addition, the average annual demand resulting from on-premise-use facility funds is expected to be steady as new AST projects come to light as old heating oil tanks are removed.

The FY2018 and FY2019 budgets were established at \$12,450,000 per year based on predicted revenue, anticipated pace of cleanup work, administrative costs, and fund balance.

Release Prevention Expenses: Between FY 2015 and FY 2016, Safetank reimbursements increased 9.7%, from \$260,043 in to \$285,206. FY 2017 saw a 33.3% decline in Safetank reimbursements to \$190,269. This decline is primarily due to the Safetank coordinator position being vacant for a portion of the fiscal year. Average annual demand of approximately \$450,000 is expected to continue for a number of years. The 2015 passage of HB 664-FN allows DES the opportunity to address the excess demand. Fully funding this important program will continue to offer benefits in future years through reduced cleanup expenses.

Total Available Funds: If total available funds, i.e., new revenues plus fund balance, are not sufficient, cleanup work may need to be delayed or postponed. Delay or

postponement increases the risk to public health and the environment as contaminants move further from the source property, through soil and water media. It is also important that reserve funds be available to respond to increases in petroleum releases that can occur following events like floods or ice storms. HB 664-N provided DES with additional flexibility to address these unforeseen events, and allows cleanup projects and Safetank work that may have been delayed in prior years to be completed.

Tables 5 and 6, respectively, in the Appendix summarize comparative FY 2015 through FY 2017 financial performance, and FY 2018 and FY 2019 projected revenues and expenses for the program.

Appendix

Table 1 - Historic Financial Performance

Category	Oil Discharge & Disposal Cleanup Fund (RSA 146-D)
Year Statute Effective	1988 ⁽¹⁾
Revenues & Start-up Funds	\$346,923,518
Program Management & Administrative Costs	(\$40,472,488)
Loan Expenses ⁽²⁾	(\$2,400,000)
Program Management & Administrative Costs - % of Total Expense	12.2%
Reimbursed Cleanup Expenses	(\$285,999,656)
Release Prevention (SafeTank) Expenses & Research/Contracted Cleanup Expenses	(\$5,850,645)
Transfers	(\$1,150,000)
Balance	\$11,050,729

NOTES:

(1) Original cleanup fund established in 1988. Additional funds were established in 1993 (RSA 146-E), 1995 (RSA 146-F), and 2001 (RSA 146-G). In 2015 all funds were consolidated under RSA 146-D. RSA 146-D.

(2) Loan expenses result from repayment of program start-up funds and other inter-fund loans (included in revenues.)

Table 3 - Distribution of Cleanup Projects as of June 30, 2017

Project Type		Total New Projects in FY 2016	Total New Projects in FY 2017	Eligible Projects in Progress by Cleanup "Phase"					Eligible Projects Completed	
				Initial Response Action	Site Investigation	Remedial Action	Monitoring	Total In Progress	Number	Average Years to Complete
Gasoline and Diesel Releases	Above Ground Storage Tank (AST)	0	0	0	6	9	23	38	58	6.2
	Underground Storage Tank (UST)	23	10	7	68	153	340	568	1,049	7.5
Gasoline Ethers (MtBE and Related Compounds) Releases		0	0	0	8	13	26	47	170	4.8
Heating Oil Releases	Above Ground Storage Tank (AST)	0	0	0	2	3	3	8	19	5.9
	On Premise Use Fuel (OPUF)	79	54	95	58	9	43	205	1,979	1.3
Motor Oil & Used Motor Oil Releases		1	2	1	3	4	5	13	39	4.4

Initial Response Action includes activities to contain a petroleum discharge and abate immediate environmental and public health risks. The work may include soil removal, petroleum recovery and vapor mitigation. Less complex projects, e.g., on-premise-use fuel oil discharges at private homes, may remain in this phase from start to completion.

Site Investigation is needed at more complex projects to determine the magnitude and extent of contamination to develop a remedial plan. A typical investigation involves installation of groundwater monitoring wells and sampling/analysis to determine groundwater flow and receptors.

Remedial Action is needed at more complex projects to remove or treat contamination in soil and groundwater, and abate vapor problems.

Monitoring is performed to determine if/when groundwater contamination has decreased to State standards. For some projects under Monitoring, completion could be accelerated with active remediation to aid in natural degradation. For gasoline ether projects, Monitoring also includes one public water supply that is performing additional periodic water quality analysis due to the presence of MtBE.

Oil Fund Disbursement Board FY 2016 - 2017

Annual Report

Table 5 - FY 2015/2016/2017 Comparative Financial Performance

	FY 15	FY 16	FY 17
Beginning Balance	\$4,814,885	\$6,852,578	\$8,692,412
Revenues (1)	\$16,772,486	\$16,273,699	\$15,974,482
Program Management & Administrative Costs (2)	(\$2,625,695)	(\$2,620,865)	(\$2,679,312)
Reimbursed Cleanup Expenses (3)	(\$11,753,243)	(\$11,446,766)	(\$10,696,689)
Release Prevention Expenses (SafeTank) & Contracted Cleanup Expenses (4)	(\$355,855)	(\$366,234)	(\$240,164)
Ending Balance	\$6,852,578	\$8,692,412	\$11,050,729

NOTES:

(1) Total revenues include import fees, interest and inter-fund transfers.

(2) Program management and administrative costs include: DES project management, fund administration and facility compliance services, Dept. of Safety import fee collection activities, and Dept. of Justice legal services.

(3) Cleanup expenses are for reimbursement costs incurred by eligible parties.

(4) Release prevention expenses are for reimbursement of up to \$1,500 for low-income homeowners to replace substandard heating oil storage tanks. Contracted cleanups are for locations heating oil storage tanks. Contracted cleanups are for locations where the MtBE contamination source is unknown. At such locations NHDES may provide temporary water supplies and perform investigations and other work to address the contamination problem.
